

LONG TERM POWER OUTLOOK

Table of Contents

1	INTRODUCTION.....	
1.1	GENERAL	
1.2	DESCRIPTION OF EMPS-MODEL	
2	KEY ASSUMPTIONS OF ANALYSIS	
2.1	OUTLOOK AND PRICES FOR FUELS AND CARBON	
2.2	ENERGY AND CLIMATE POLICY FRAMEWORK	
2.2.1	<i>Policy framework until 2020.....</i>	
2.2.2	<i>Framework for 2050.....</i>	
2.3	CONSUMPTION OF ELECTRICITY.....	
2.3.1	<i>Development of consumption up to 2010</i>	
2.3.2	<i>Consumption outlook</i>	
2.4	CAPACITY OUTLOOK	
2.4.1	<i>Renewable power production</i>	
2.4.2	<i>Thermal production</i>	
2.4.3	<i>Nuclear production.....</i>	
2.4.4	<i>Transmission capacity</i>	
2.5	DEVELOPMENT OF NEIGHBORING REGIONS	
2.5.1	<i>Baltic markets.....</i>	
2.5.2	<i>Russian markets</i>	
2.5.3	<i>Central Europe.....</i>	
3	SCENARIOS AND BACKGROUND ASSUMPTIONS	
3.1	BASE – SCENARIO	
3.2	ENHANCED POLICY – SCENARIO	
3.3	SCENARIOS FOR HIGH AND LOW FUEL & CARBON PRICES	
4	RESULTS.....	
4.1	DEVELOPMENT OF PRICE OF ELECTRICITY.....	
4.1.1	<i>Development of area prices.....</i>	
4.1.2	<i>Development of system price</i>	
4.2	CHANGES IN ENERGY BALANCE.....	
4.3	UNCERTAINTIES.....	
5	SUMMARY AND CONCLUSIONS	
6	REFERENCES.....
